

# WEBDEV and WINDEV Mobile cleaning up in New York City

## The Company

Carnegie Cleaners in New York City has been in the dry-cleaning business for over 50 years. It serves many of the 5-star hotels in New York in all their dry-cleaning needs: staff uniforms, guest garments, etc. Carnegie Cleaners needed a solution to keep track of all dry cleaned garments. This solution was provided by CleanEZ Technologies. CleanEZ Technologies provides specialized software solutions for dry cleaning businesses in the USA: point of sale, billing, garment tracking/automation, garment conveyor integration, etc.

## Project Manager

**Henry Billini** is the president of CleanEZ technologies. CleanEZ technologies distributes a Windows solution called CleanEZ Touch which handles the back office for dry-cleaning businesses.

## The cleaning cycle

CleanEZ software covers the entire process of a garment cleaning. Uniforms, sheets and guests garments are picked up and scanned at the hotel. They are then transported to the Carnegie Cleaners facilities. After dry cleaning they are transported back to each hotel. Each uniform is placed in the corresponding locker. The guest garments are sent to the guest rooms.

Each individual garment has a unique tag that is scanned at each stage of the process. This allows managers to know at any-time where a garment is, where it's been and where it's going. This also lets them track down lost garments.

## WEBDEV makes perfect business sense

The WebDev application for Carnegie Cleaners interfaces with a Windows application called

CleanEZ Touch. WebDev accesses and reports data being scanned by the Laundry Plant at each phase of the Garment Cleaning Cycle: Garment Pickup, Garment Processing, Delivery and Acceptance. WebDev retrieves data online to show Management whether a garment may have been lost or not returned to the hotels. Each hotel logs in with a unique username. Each hotel employee name or garment can be searched for problem status. Historically the windows back office application, CleanEZ Touch, was developed in Foxpro. *"After facing the difficult situation of having to change our development tool when it was decided that Foxpro would no longer be maintained, we found that programming with WEBDEV made perfect business sense. You use fewer resources and make higher revenue. Applications are easier and quicker to implement. This allows the Systems Analyst to implement the design."* – says Henry.

*"Furthermore having an integrated native access to our Foxpro database enabled us to get started quickly and above all to give real solutions to our customers fast. I have personally researched many frameworks and programming tools for rapid application development. The field checking and auto generation of code save many man hours of development."*

*I have now been able to cut the development time impressively.”*  
 – Henry adds

**The WINDEV, WEBDEV and WINDEV Mobile compatibility triple benefits**

WebDev allows existing application data to be accessible with ease to the WEB. And the consistent analysis design among WINDEV, WEBDEV and WINDEV Mobile saves considerable programming efforts.

It also opens the door to new sales when writing an application for any one of the WINDEV platforms, a new application within a different platform can emerge. This triples the Company’s revenues and triples the benefits to the clients.

**WINDEV Mobile: the Superior Products for Developers**

One of the applications, developed with WINDEV Mobile, allows personnel to scan all garments and have a real time follow-up of the whole process. This lets all managers know exactly where every piece is at all times. *“WINDEV Mobile is truly a blessing. I have not found an easier tool to integrate existing desktop and WEB applications to a PDA. The consistency of the Language and multiple data manipulation methods makes Windev Mobile the Superior Products for Developers.”* – says Henry.
